## Education

---

|                                   |                         |
|-----------------------------------|-------------------------|
| West Hawaii Explorations Academy  | April 2020 – April 2026 |
| Mount Wachusett Community College | October 2025 – Current  |

## Projects

---

### AI Job search & Coach February 21<sup>st</sup> 2026 – Current

- Developed countermeasures to obfuscated CSS/HTML variables.
- Architect of project file system and tech stack.
- Engineered project quick deployment for bug fixing and feature releases.

Right now the LLM runs with direct access to the user(s) database, if I were to redesign the app I would send information to the agents in a virtual machine to avoid a data-breach via prompt injection.

### Open-source coding agent, author; Yeyito March 27<sup>th</sup> 2026 – Current

- Collaborating on developing features pull requests and fixing merge conflicts.
- Developing solutions for edge-cases, and patching security vulnerabilities.
- Utilized clean room engineering principles to improve tooling architecture.

If I were to architect the project I would stick to utilizing one file-system standard, going as far to make an alias to the executable so the user could rely on their expectations when developing or configuring.

### Game with Engine coded in Go Jan 8<sup>th</sup> 2026 – March 10<sup>th</sup> 2026

- Coordinating team of people to effectively utilize available hours.
- Utilizing Object-oriented programming to drive demanding game logic.

My hardest lesson. I failed to account for scaling models to the resolution, and the game time to the frame rate; resulting in collusion being way off depending on the resolution, and the game speed varying on the frame-rate.

---

**Front-End:** Next.JS, REACT, TypeScript.

**Back-End:** C++, GO, Python, Git, Linux, AWS.

**Soft Skills:** Team communication, Sorting algorithms, creating/following style guides. Enjoys sit-down's.
